

FRODE PEDERSEN

Application

- Measurement of temperature in pipes and containers with gaseous and liquids media, such as air, vapour, gasses, water and oil
- The operating range is up to 800°C, max. 50 bar and flow velocity up to 25m/sec (air)
- Fields of application
 - Petro- and chemical process engineering
 - Power plants
 - Boilers

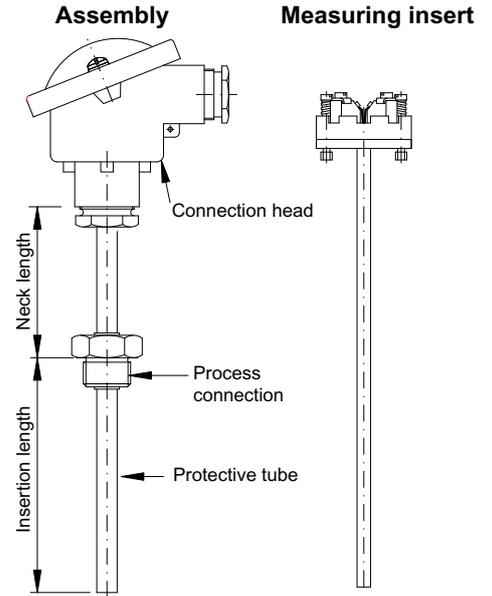

Technical features

- Thermocouple type J, K and N acc. to IEC-584-1
- Permissible mechanical and thermal stress acc. to DIN 43763
- Connected to the process with a screwed attachment welded on the protective tube
- The measuring insert can be exchanged or calibrated without closing down the process
- Measuring insert is a mineral insulated type, vibrationproof
- Protective tube stainless and acidproof steel
- Optionally, can be supplied with head mounted transmitter

Ordering

The requested sensor is selected from the table below
The colour code means:

- Standard: Built of standard modules (short delivery time)
- Variant: Modified standard modules
- Special: Special versions and material. We are specialist in temperature measurement. Please contact us and we shall do our utmost to solve your specific measuring task

Note:

The 0.5/0.9 time is the time that it takes the sensor to reach 50%/90% of the final value of a temperature change of a medium.

If media and velocity are different from the ones stated, the time can change significantly.
